SELLER SPREADSHEET SERVICE / DEMONSTRATION

Know the margin before you list.

A small, editable Excel tool that turns a product’s cost stack into a clear profit estimate and a break-even price. Built for one product at a time; platform fees stay editable rather than guessed.

INPUT	RESULT	DELIVERY
Your costs + current fees	Profit, margin + price floor	Editable .xlsx workbook

What the starter version includes

- One product / one SKU unit-economics sheet.
- Editable product, packing, shipping, fixed-fee and percentage-fee inputs.
- Net profit, margin, break-even price, target-price scenarios and ad-spend ceiling.
- A short “start here” guide plus a sample scenario.

Suggested first-order test price: $10 for one product (a hypothesis, not a validated market rate). Exact platform fees and any special requirements would be agreed before accepting an order.

01 / WORKED EXAMPLE

One product, all costs visible.

Sample inputs below mirror the workbook’s built-in candle example. Percentage charges are applied to sale price; fixed costs are added per order.

INPUTS	VALUE
Sale price	$32.00
Product cost	$9.00
Packaging	$1.50
Seller-paid shipping	$4.00
Fixed payment fee	$0.30
Marketplace fee	6.5%
Payment processing	2.9%
Advertising reserve	5.0%
Returns/loss reserve	2.0%

NET PROFIT / UNIT	**$11.95**
PROFIT MARGIN	**37.3%**
BREAK-EVEN PRICE	**$17.70**
PRICE FOR $5 PROFIT	**$23.68**
PRICE FOR 20% MARGIN	**$23.27**
MAX AD COST AT BREAK-EVEN	**$13.55**

How the estimate is formed

Fixed costs: $14.80. Percentage costs: 16.4% of the $32.00 sale price ($5.25). Estimated total costs: $20.05; estimated remainder: $11.95. Break-even price = fixed costs ÷ (1 − percentage costs).

Important: this sample omits taxes, labor, overhead, duties, stock financing and any fees not entered. Actual profit depends on the seller’s current account, category, order and tax situation. ROAS is only a planning ratio, not an advertising result.

Order scope & delivery checklist

- Buyer supplies one product’s costs and the platform/payment fee rates they want modeled.
- Deliverable: editable Excel file with formula-driven results and simple usage notes.
- One clarification/revision within the agreed input assumptions.
- No account access needed; no client data retained in the demo. No work starts and no sale is promised from this sample.

Commercial status: private demonstration only. No listing, buyer outreach, external publication or earnings has happened. The $10 figure is a proposed test price, not confirmed demand.
